STG - (A) United States patent

AB - A modified concentric spectrograph for diffracting light with high
stray light rejection without astigmatism is provided. The modified
spectrograph includes a grating, a lens, and at least one entrance
port and one exit port. The grating has a concave surface and a
meridian plane with a first side and a second side. The lens has a
substantially planar surface and a convex surface. Preferably, the
convex and concave surfaces are substantially concentric. The ports
are substantially located on different sides of the meridian plane
near a focal plane of the spectrograph. The position of a focal plane
may be modified using an optically transmissive triangular prism with
a reflective surface, and an optically transmissive block. The
position of a focal plane may further be modified with one or more
optically transmissive plates. Methods for using the spectrograph are
also provided.
